ACATS Modification List for ACATS 4.0

Version 4.0E March 19, 2015

What is this?

This is the ACATS modification list for ACATS 4.0. This document includes test corrections, test removals, and new tests for ACATS 4.0. ACATS 4.0 is the current test suite for Ada, covering the third edition of Ada, ISO/IEC 8652:2012 (usually known as "Ada 2012").

ACATS Modification List version 3.1F for ACATS 3.1 is the current list for that test suite. ACATS 3.1 should be used for testing implementations that support Amendment 1 (ISO/IEC 8652:1995/AMD 1:2007, often known as "Ada 2005"), and will continue to be maintained as necessary for the foreseeable future.

ACATS Modification List version 2.6D for ACATS 2.6 is the current list for that test suite. ACATS 2.6 should be used for testing implementations of the second edition of Ada, ISO/IEC 8652:1995 (usually known as "Ada 95"); it also will continue to be maintained as necessary for the foreseeable future.

Changes from the last list:

New test C324003 checks the example found in RM subclause 3.2.4, including the use of aspect Predicate_Failure and the evaluation order of predicates.

An error in test C433004 was corrected; this changed the required date. Similarly, an error in test BDB3A01 was corrected; this changed the required date.

New tests C552001 and C552002 test the operation of array component iterators. New tests B552001, B552A04, and B552A05 test legality rules for each kind of iterator. New tests B551001 and B551002 test legality rules for aspects Default Iterator and Iterator Element, respectively.

In test B730009, the completion of Priv12 at line 131 violates 7.3(10.1/3); this is corrected by adding **limited** to the full type declaration.

New test B730010 checks that 7.3(10.1/3) is enforced.

Corrected two errors in test B732001. Corrected two errors in CC51010. As these are new tests that were issued this quarter, these corrections do not change the required date of the test.

New test CA21002 checks that the Pure and Preelaborate aspects can be specified with a value imported from another package.

New test CC51011 was removed pending the resolution of AI12-0155-1; the operations declared in package Inner necessarily violate the freezing rule that all types in a profile that is being frozen are completely defined.

New test CXAG001 checks the use of Ada.Directories. New test CXAG002 checks the use of Ada.Directories.Hierarchical File Names.

New tests CXAH001, CXAH002, and CXAH003 were missing Applicability Criteria. This only changes the header of the test; no Ada code was changed. As these are new tests that were issued this quarter, these corrections do not change the required date of the tests.

Additional items are added to Impdef to support some of these new tests.

A number of new tests had overlong lines, unintended tab characters, and other violations of ACATS test lexical rules. These have been corrected. Some of these changes caused the required dates to change. These tests include B3A1008, B3A1009, B3A2017, B457004, B480002, B438003, B640001, B732C01, B732C02, BA12017, BXAI005, BXAI006, BXAI007, BXAI008, BXAIA03, BXAIA04, C391003, C3A1003, C3A1004, C431002, C433002, C433003, C433005, C550001, C640002, C732001, C732A00, C732C00, C760015, CB30002, CDB3A01, CXA5016, CXAC008, F732A00, F732C00, and FDB3A00.

A number of existing, older tests had overlong lines, unintended tab characters, and other violations of ACATS test lexical rules. These have been corrected. Test affected are BDD2004, BDD2005, C540002, C552A01, C552A02, CC30003, CC30004, CD30006, and CD30007.

New tests posted between January 1, 2015 and March 31, 2015 will become required for conformity assessments on October 1, 2015. New tests posted between October 1, 2014 and December 31, 2014 will become required for conformity assessments on July 1, 2015. New tests posted between July 1, 2014 and September 30, 2014 will become required for conformity assessments on April 1, 2015. All tests posted to modification lists for other versions of the ACATS are included in ACATS 4.0 if appropriate and thus are required for conformity assessment using ACATS 4.0 The effective dates of tests are marked in the lists.

2015 Corrigendum:

With ACATS Modification List 4.0B, we have started including tests for corrections (including new features) in the upcoming 2015 Corrigendum. Most of these corrections have already been approved by WG 9, and those that haven't been are expected to be approved at their next meeting. All of these changes are technically corrections to Ada 2012; as such we will assume all such corrections are implemented for Ada 2012 compilers.

Implementers can request grading modifications for any tests containing 2015 Corrigendum changes until the Corrigendum is approved as a whole by WG 9 (expected at their late June 2015 meeting). Note that most such tests will not be required until after that meeting anyway, as new tests have a six month review period before being required.

Notice:

The ACAA has created and maintains the Ada Conformity Assessment Test Suite for the purpose of conformity assessments conducted in accordance with the International Standard ISO/IEC 18009 - Ada: Conformity assessment of a language processor. This test suite should not be used to make claims of conformance unless used in accordance with ISO/IEC 18009 and any applicable ACAA procedures.

List explanation:

Test numbers given are for the basic test. Categories are "Withdrawn" (the test should not be processed for Ada conformity assessments); "Allowed Modification" (either the original test or the modified one should be processed for Ada conformity assessments); "Modified" (the modified test must be processed for Ada conformity assessments); "Pending New" (the test does not need to be processed for Ada conformity assessments, but will be added in the future); "New" (the test is processed for Ada conformity assessments).

ACATS version labels are provided with all new and modified tests. Use this label to retrieve the test from the ACATS VCS. See "How to get new and modified tests".

In citations, line numbers are given relative to the start of a test file in the format of '@<line#,line#,...>'; if a test program comprises more than one file, then the particular file will be indicated by "fn", where "n" is the test-program name's file-designator numeral. E.g., "B38103E: @f1-31, ... " denotes test file b38103e1.ada. In cases where there are two or more rationales for different errors in a test program, these different rationales with their respective line citations are listed on separate lines. References to the Ada standards are given in the format:

```
<section|chapter>.<clause>[.<subclause>]:<paragraph>
```

These references are to the Ada standard as available at http://www.adaic.org/resources/add-contentstandards/12rm/html/RM-TOC.html.

How to get new and modified tests:

The official home of the ACATS test suite is the ACAA web site. The site can be accessed at www.ada-auth.org.

The complete set of official new and modified tests are available in the Mod_4_0E.Zip and Tar files on the ACAA web site.

Individual new and modified tests can be retrieved from the ACATS VCS. Simply navigate to the appropriate directory (folder), and select the test you want. Select the revision you want (usually the most recent) and it will be retrieved for you. Tests are stored in directories that correspond to the test's prefix. For instance, the test CD92001.A will be found in the CD directory. You can also browse the differences between versions of a test. [In case of a conflict, the files in the ACATS VCS should be considered the 'official' versions.]

If you cannot get the files from the official site or you cannot get the files in a format appropriate for your processor, please contact your ACAL.

The baseline ACATS 4.0 is available in various formats on the ACAA web site.
